

AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A banknote handling device that handles banknotes, said banknote handling device comprising:
 - a money-in module that receives banknotes from a customer;
 - a counterfeit collection box that stores counterfeit banknotes;
 - a discrimination module that carries out counterfeit detection and determines each banknote as counterfeit or as genuine;
 - a counterfeit processing module that stores each banknote determined as counterfeit into said counterfeit collection box, based on a result of the counterfeit detection by said discrimination module, and prohibits the stored counterfeit banknote from being returned to the customer; and
 - a notification module that notifies the customer of predetermined kind of information indicative of a total amount of money received from the customer and an amount of money settled as a transaction, regardless of the result of the counterfeit detection by said discrimination module, wherein:
 - the total amount of money includes an amount of money in counterfeit notes if existing in the banknotes received from the customer and
 - the predetermined kind of information notified by said notification module includes information for specifying an amount of money in banknotes determined as counterfeit by said discrimination module, out of the total amount of money received from the customer.

2. (Previously Presented) A banknote handling device in accordance with claim 1, wherein the information notified by said notification module includes information for specifying the type and number of the banknotes determined as counterfeit by said discrimination module.

Claim 3 (Cancelled)

4. (Original) A banknote handling device in accordance with claim 1, said banknote handling device further comprising:
an output module that outputs a form describing the information.

Claims 5-10 (Cancelled)

11. (Currently Amended) A banknote handling device that handles banknotes, said banknote handling device comprising:
a money-in module that receives banknotes from a customer;
a counterfeit collection box that stores counterfeit banknotes;
a discrimination module that carries out counterfeit detection and determines each banknote as counterfeit or as genuine;
a counterfeit processing module that stores each banknote determined as counterfeit into said counterfeit collection box, based on a result of the counterfeit detection by said discrimination module, and prohibits the stored counterfeit banknote from being returned to the customer;

a notification module that notifies the customer of predetermined kind of information indicative of a total amount of money received from the customer and an amount of money settled as a transaction, regardless of the result of the counterfeit detection by said discrimination module;

a temporary storage box that temporarily keeps the banknotes received through said money-in module;

a storage box that stores genuine banknotes; and

a control module that temporarily keeps the received banknotes in said temporary storage box and, in response to a deposit instruction from the customer, conveys banknotes determined as genuine, among the banknotes temporarily kept in said temporary storage box, to said storage box for storage while storing any banknote determined as counterfeit in said counterfeit collection box, said control module, in response to a cancellation instruction from the customer, returning banknotes determined as genuine, among the banknotes temporarily kept in said temporary storage box, to said money-in module while storing any banknote determined as counterfeit in said counterfeit collection box, wherein:

wherein the total amount of money includes an amount of money in counterfeit notes if existing in the banknotes received from the customer, and

the predetermined kind of information notified by said notification module includes information for specifying an amount of money in banknotes determined as counterfeit by said discrimination module, out of the total amount of money received from the customer.

12. (Previously Presented) A banknote handling device that handles banknotes, said banknote handling device comprising:

a money-in module that receives banknotes from a customer;

a counterfeit collection box that stores counterfeit banknotes;

a discrimination module that carries out counterfeit detection and determines each banknote as counterfeit or as genuine;

a counterfeit processing module that stores each banknote determined as counterfeit into said counterfeit collection box, based on a result of the counterfeit detection by said discrimination module, and prohibits the stored counterfeit banknote from being returned to the customer;

a notification module that notifies the customer of predetermined kind of information indicative of a total amount of money received from the customer and an amount of money settled as a transaction, regardless of the result of the counterfeit detection by said discrimination module; and

a management module that maps each banknote determined as counterfeit and stored in said counterfeit collection box to customer information on the customer who has paid in the banknote,

wherein the total amount of money includes an amount of money in counterfeit notes if existing in the banknotes received from the customer.

13. (Previously Presented) A banknote handling device that handles banknotes, said banknote handling device comprising:

a money-in module that receives banknotes from a customer;

a counterfeit collection box that stores counterfeit banknotes;

a discrimination module that carries out counterfeit detection and determines each banknote as counterfeit or as genuine;

a counterfeit processing module that stores each banknote determined as counterfeit into said counterfeit collection box, based on a result of the counterfeit detection by said discrimination module, and prohibits the stored counterfeit banknote from being returned to the customer;

a notification module that notifies the customer of predetermined kind of information indicative of a total amount of money received from the customer and an amount of money settled as a transaction, regardless of the result of the counterfeit detection by said discrimination module; and

a control module that, when the banknotes received from the customer include any counterfeit banknote, stores all the banknotes including both genuine and counterfeit banknotes in said counterfeit collection box in such a manner that a bundle of banknotes received from each customer is parted from bundles of banknotes received from other customers by partition sheets,

wherein the total amount of money includes an amount of money in counterfeit notes if existing in the banknotes received from the customer.

14. (Original) A banknote handling device in accordance with claim 13, said banknote handling device further comprising:

a stacker that keeps the partition sheets; and

a management module that manages customer information on each customer who has paid in any counterfeit banknote, mapped to the corresponding bundle of banknotes parted by the partition sheets.

Claims 15-20 (Cancelled)
